Rail session

Daniel Lopour
07/11/2023 Sevilla
User Consultation Platform
All EU Space Program components with an integrated market/user driven approach

8 parallel sessions

Market & User Knowledge

Extended Market and technology monitoring and forecasting

Extended and synergic User Consultation Platform

Better understanding the MS needs and adding Copernicus Other Users satisfaction survey

Demand Support & users

A common market segments approach for all EU space downstream

Extended key account with main players of the value chain

Offer Creation

Creation of new “made in Europe” products and services.

Large implementation of end-to-end solutions leveraging synergies.

Supporting entrepreneurship, SME and start-ups
## Report on Rail User Needs and Requirements

An in-depth investigation will be performed. A partial specification will be analysed in next versions.

**Legend**
- EO only application
- GNSS only application
- Hybrid/synergetic application (combined use of EO and GNSS)

- A: An in-depth investigation
- B: A partial specification
- C: Will be analysed in next versions

**Applications covered in 2023 edition**
Rail session - Agenda
Space session - Agenda

10:00 - 10:20: Session Agenda presentation: Daniel Lopour, EUSPA
10:20 – 10:40: EO – Introduction to Copernicus Services and performances: Arnis Kadakovskis, EUSPA
10:40 – 11:00: SATCOM – An option for FRMCS: Ricardo Campo, CEDEX
11:00 – 11:10: Discussion
11:10 – 11:25 Break
11:25 – 11:45: Signaling - Independent train localizer: Valentin Barreau, SNCF
11:45 – 12:05: Signaling - Virtual Balise, Digital map: Massimiliano Ciaffi, Giusy Emmanuele, RFI
12:25 – 12:45: EO use cases and requirements for Rail: Bo Larsson, Trafikverket
12:45 – 13:00: Discussion

13:00 – 14:00 Lunch Break
14:00 - 15:10: Discussion: GNSS-based localization requirements in Rail, Juliette Marais
15:10 – 15:30: R&D activities on EGNSS additional dissemination means, improved authentication solutions for EGNOS and Galileo and contribution to Ionospheric Prediction Service, Javier Ostolaza
15:30 – 15:45: Break
15:45 – 16:20: Discussion: EO requirements in Rail, Arnis Kadakovskis
16:20 - 16:55: Discussion: SATCOM requirements in Rail: Daniel Lopour & Ricardo Campo
16:50 – 17:00: Conclusions and next steps: Daniel Lopour
Session Guidelines
Space session - Guidelines

ZOOM rules
• Raise your hand for questions
• Mute yourself once finished the interventions

• We have to respect the time constraints
• We will let you know (speaker) when to close

Thank you for your cooperation
Rail in context of the EU Space Programme
A new EU Space Programme

EU space activities under one umbrella

EGNOS
EGNOS “Makes navigation signals more accurate and trustable for Safety-critical applications”
Operational in 400+ airports & helipads in 23 countries

Galileo
Global satellite navigation and positioning system (GNSS)
More than 3 billion Galileo receivers worldwide

Copernicus
Earth Observation (EO) and monitoring based on satellite & non-space data
Nr.1 world provider of space data and information (>20TB/day)

GOVSATCOM
Secure satellite communications for EU governmental actors
Rapid support over crisis areas

Space Situational Awareness (SSA)
Space Surveillance and Tracking (SST)
Space Weather Events (SWE)
Near-Earth Objects (NEO)

Others
Access to Space
Research & Innovation
Entrepreneurship
Certification & standardisation
Capacity Building
### Galileo and EGNOS Services

#### Galileo Initial Services
- **Open Service (OS)**: Freely accessible service for positioning and timing*
- **Public Regulated Service (PRS) – Governmental Service**: Encrypted service designed for greater robustness and higher availability – secure satellite communication
- **Search and Rescue Service (SAR)**: Locates people in distress and acknowledges that the distress signal has been received
- **High Accuracy Service (HAS)**: Delivers high accuracy services, freely accessible
- **Under preparation**: Commercial Service Authentication (CS)

* OS Navigation Message Authentication (OSNMA) is currently under testing

#### EGNOS Services
- **Open Service (OS)**: Improving GNSS accuracy, intended mainly for high-volume satellite navigation applications for use by consumers
- **Safety of Life Service (SoL)**: Providing a high level of integrity for users for whom safety is essential (e.g. civil aviation, in accordance with ICAO standards)
- **Data Access Service (EDAS)**: Offering EGNOS data with greater added value through internet, intended mainly for professional or commercial use

**Galileo Initial Services** are provided to worldwide users since December 2016

**EGNOS services** are provided to users since October 2009
OSNMA status and roadmap

- OSNMA SiS ICD (final format) and Receiver Guidelines published in Dec’2022
- Transmission of SiS as per OSNMA SiS ICD (final format) since August 2023
- Operational cryptographic data to be published by end 2023
- Initial Service Declaration (Service Definition Document publication and signal switch to ‘operational’ mode) foreseen by Q1’24
What is the Galileo HAS

Galileo HAS provides precise corrections for satellite orbit, clock and signal biases.

Galileo HAS corrections distributed via

Galileo satellites, E6-B signal (1278.75 MHz)

Internet

Typical accuracy in the decimetre level (after convergence), with Precise Point Positioning (PPP) receivers

(Almost*) global coverage and free

*global coverage of corrections but no global performance commitment yet
EGNOS Services

EGNOS services are provided to users since October 2009

EGNOS System state-of-play

**EGNOS V2** is the current System in Operations

Delivering SoL service for Aviation since 2011, based on GPS-only augmentation

Constant improvement in answer to user needs (e.g. coverage extension, service for Maritime, robustness improvements)

Need to extend the service provision of EV2 to ensure the handover with EV3 including risk of additional delay @ LIFEX 1&2 System Releases to be procured by EUSPA to TAS-F

Security enhancement: initial SECMON capability at GSMC

**EGNOS V3** is the new generation of EGNOS

Bringing Galileo use into EGNOS System and SoL services

Augmenting both GPS and Galileo

Improved performance and geographical coverage thanks to dual-frequency & dual-constellation

Built-in security (with SECMON from GSMC)

Future extensions to Africa and neighbourhood (e.g. Ukraine, North Africa)
EGNOS services perspectives

Primary means of navigation for Aviation in 2030

• Performance Based Navigation (PBN)
• Better availability (99.9%), more resilience, EU autonomy (with Galileo)
• New Airspace users (helicopters, small aerodromes, drones, ...)

Maritime

• Initial service in 2023 for maritime and in-land navigation
• Towards autonomous vessels navigation and zero-emissions shipping
• Not only EGNOS: end to end solutions using HAS/OSNMA and Copernicus

Rail

• Making ERTMS accessible on all lines
• R&I substantial investment to prepare railway operators and signalling industry
• A new service under preparation, facing the challenge of Rail safety standards
Transport holds the largest GNSS Rx installed base, in non mass market segments

- **Automotive** is the second largest market segment (after consumer solutions) in the next decade.
- In ‘Other’ segments, **Aviation and Drones** are the biggest segment.
- **Maritime** is the second largest market in 2021 and keeps stable by 2031.
- **Rail** grows more than x3 by 2031.
ERTMS remains to be „in the focus“

European Parliament supports GNSS inclusion in ERTMS (resolution of 7 July 2021 on railway safety and signaling), calling on the EU rail industry to develop technical solutions in order for the GNSS to enable the ERTMS on a large scale

✓ Points out the need to ensure synergies between the ERTMS and the European Global Navigation Satellite System (GNSS) as soon as possible
✓ Calls on the EU rail industry to develop technical solutions in order for the GNSS to enable the ERTMS on a large scale
✓ Calls on the Commission to consider introducing the GNSS in the upcoming ERTMS TSI CCS revision in order to close the remaining technological gaps and embrace innovation
✓ Calls for cooperation between the Agency (ERA) and the GNSS Agency (EUSPA) to be stepped up in order to phase the GNSS into ERTMS standard
EU Space support to rail

• Close coordination with ERA and ERJU:
  • EUSPA participates as gateway to space within EU-Rail System pillar SG
  • ERTMS Change request 1368: Updated documentation for including EGNOS Augmentation in ERTMS provided as input to next steps within the EU-Rail System Pillar
  • Work breakdown structure to close the residual gaps towards demonstrating the feasibility of GNSS for train signaling within EU Rail demonstrators agreed at working level between EUSPA, ESA, EU-Rail and EUG
• Further progress achieved within adoption in non-safety relevant applications
• EUSPA Fundamental elements programme: 2 projects on receiver/antenna prototype development in final stage, demonstrating the prototypes (TRENI and GALITS)
• EGNOS Adoption Grants in progress (BETRIAN & EGNOS AIR)
• Continued support in frame of EUSPA R&D
  • HORIZON-EUSPA-2022-SPACE – projects in GAP phase - to be launched in Q1/2024
  • HORIZON-EUSPA – Call launched – dealine in February 2024
...R&D coordination is the key

EUSPA R&D as a technology driven contributor to the ERJU Innovation pillars
EUSPA R&D – where the story began

Complementing the existing European Train Control System (ETCS) odometry system through an on-board GNSS+EGNOS-based multi-sensor fusion architecture enabling absolute safe train positioning and navigation whilst also transforming the way train localisation is done today.

Development of a shared high integrity and high accuracy platform for train signaling and other applications such as connected and driverless cars or UAV for surveillance of roads and railways.

Development of tools for designing high integrity and accuracy ground truth and digital trackside map indispensable for train positioning with EGNSS and other sensors including procedures for automated collection of in field measurement data with commercial trains.

Development of a drone-based technology to monitor the physical status and electronic functionality of both non-safety-critical and safety-critical railway signalling assets and to execute specific maintenance activities.
Copernicus services

https://atmosphere.copernicus.eu/

https://marine.copernicus.eu/

https://climate.copernicus.eu/

https://emergency.copernicus.eu/
Copernicus - Railway specific applications

Monitoring of subsidence and landslide risks
Copernicus can contribute to solutions providing monitoring capabilities and risk indications related to railway infrastructure protection, helping to ensure seamless rail infrastructure operation incl. e.g. monitoring of soil moisture

Monitoring of vegetation
Copernicus data is present within the mix of Earth observation techniques for protection of train gabarit from risks associated with vegetation growth

Construction monitoring of railway infrastructure and its proximity
Copernicus can be used within applications focused on centralized monitoring of construction works on the infrastructure as well as construction around it with the objective to mitigate any possible negative effects on operations

Infrastructure maintenance
Copernicus can help to indicate changes in status and condition of railway infrastructure assets, supporting decisions regarding necessary corrective or preventive maintenance
GOVSATCOM (GOVernmental SATellite COMmunications) – an alternative for terrestrial communication in ERTMS?

Today the fragmentation of military, governmental and civilian users results in:
- suboptimal use of resources,
- interoperability issues

- Under EU GOVSATCOM the existing satellite communication capacities (nationally owned + commercial ones) and services will be combined into a common Union pool with appropriate security requirements.
- The pooling of satcom resources and the aggregation of user demand will optimise the match between the GOVSATCOM demand and the supply, will support additional security features and foster interoperability.
- 1 km of GSM-R infrastructure costs approximately 50k EUR – Could EU SATCOM serve as an alternative in the future?

GOVSATCOM to support major infrastructures
where the absence of proper communication links can be detrimental to the security and safety of the EU, the Member States and its citizen, including transport (e.g. ATM or ERTMS)

Total budget: 34.5

**Deadline: February 2024**

**Innovation action (IA)**
Activities to produce plans and arrangements or designs for new, altered or improved products, processes or services.

**Research and innovation action (RIA)**
Activities to establish new knowledge or to explore the feasibility of a new or improved technology, product, process, service or solution.
