

CLARIFICATION NO. 3

INTERNAL GSA REFERENCE: WF 238298

Related to GSA/GRANT/05/17 – "Development of a Galileo-based timing receiver for critical infrastructure"

Question no. 25: In the clarification note no.2 it is written "The development kit, also known as evaluation kit, is a Hardware and Software platform enabling fast and simple prototyping validation of the performance".

Please could you clarify in detail if this evaluation kit is a second receiver prototype or the complete development tool (software and hardware) used in the project (Spirent Simulator, PC including software analysis tool...) to validate the receiver performance.

Answer: As mentioned in the clarification note no.2 – Question no.22, the development kit is a versatile development platform (software and hardware) that allows quick prototyping for the validation of the receiver's performance.

It does not include the complete development tool (SW and HW) used in the project (Spirent Simulator, PC including SW analysis tool, etc.) and is not to be considered as a second receiver prototype.
