

Clarification Note No 1

EUSPA internal reference: WF [318064](#)

Grant procedure: EUSPA/GRANT/02/2025

"Robust and professional receiver leveraging on Galileo differentiators"

Questions raised during Industry Day webinar on 26 November 2025

Question no. 1: Will you share this presentation with the meeting participants?

Answer no. 1: The presentation will be published on the EUSPA website together with the present Clarification Note.

Question no. 2: You stated that it is possible to establish consortiums. But is it possible to present a proposal by a single applicant?

Answer no. 2: In line with Section 5.2 of the Call for Proposals, it is possible to present a proposal by a single applicant (it will be considered as mono-beneficiary grant if the proposal is selected for award). Please, the Call for Proposals (see section 2.2, 2.4, 2.5 and 10) requires the engagement of relevant professional practitioners (e.g. Police Forces, Civil Protection Authorities, Border and Coast Guards, Customs Authorities, etc.) during the project implementation. Therefore, participation of the relevant practitioners is highly encouraged, from the definition of the user requirements until the validation and demonstration phase.

Question no. 3: The target applications defined in the call are relatively specific. Is it mandatory to support at least one of them or would it be possible to propose a different type of application? In that case, would this be penalized in the evaluation?

Answer no. 3: A project under this Call for Proposals has to define target professional applications, along with the associated user requirements for robust PNT solutions, building on Galileo-based technologies in the 4 technological areas highlighted in the Call for Proposals scope (see section 2.2). For the award criteria please refer to Section 10 of the Call for Proposals.

Question no. 4: For the target application to support "routine operations and monitoring of public infrastructure", is it mandatory to apply the EWSS service?

Answer no. 4: It is not mandatory to foresee the application of Galileo EWSS in the proposal.
