

## Clarification Note #1

### Phase II of the Prize Contest

GSA internal reference: 260737

### MyGalileoDrone Prize Contest

**Question #1: Is there any template of the application form of Phase II?**

**Answer #1:** An application form template can be found as Annex to this clarification note.

**Question #2: How should the video of the flight demonstration be submitted?**

**Answer #2:** In case the size of the video is big, applicants may upload it in a shared drive and add the link in their application. In this case, please make sure that the video does not include any personal data.

**Question #3: Regarding the requirement of the Terms of Reference that the application should show recorded logs of the drone and/or proof of use of Galileo in other equipment during the demonstration, how should the teams proceed when in order to extract the log files they need to change the firmware, which in turn would compromise their commercial certification?**

**Answer #3:** In case the receiver is indeed Galileo capable (as confirmed by the specifications issues by the manufacturer and/or included in the list available [here](#)), the demo shall prove that the capability is enabled. It is not necessary to submit a certified product to phase 2. Therefore, teams can modify the firmware in order to extract the logs only for demo purposes in phase 2, without aiming at certification, and/or demonstrate that the capability is activated in the configuration used for the demonstration.
